

Scenario 4

$$N_{K=2} = 15\% (30)$$

Scenario 5

$$N_{K=2} = 8.5\% \quad (17)$$

Scenario 6

$$N_{K=3} = 53.5\% (107)$$

Scenario 7

$$N_{K=3} = 60.5\% \text{ (121)}$$

Scenario 8

$$N_{K=4} = 9\% (18)$$

Scenario 9

$$N_{K=3} = 27.5\% \text{ (55)}$$

Box plot showing the distribution of the Frailty Death process (v) for two Mass categories (1 and 2). The y-axis ranges from -1.5 to 1.5. The x-axis is labeled Mass (k). The plot shows that the Frailty Death process is significantly higher for Mass 2 compared to Mass 1. Horizontal dashed lines indicate the mean values for each group: approximately 1.0 for Mass 2 (green) and -1.2 for Mass 1 (blue).

Box plot showing the distribution of the Frailty Death process (v) for two Mass categories (1 and 2). The y-axis ranges from -2.0 to 1.0. The x-axis is labeled 'Mass (k)'. The plot shows that the Frailty Death process is significantly higher for Mass 2 compared to Mass 1. Horizontal dashed lines are present at $v \approx 0.4$ (green) and $v \approx -1.1$ (blue).

A box plot showing the distribution of the Frailty Death process (v) for three groups defined by Mass (k): 1, 2, and 3. The y-axis ranges from -6 to 4. Three horizontal dashed lines are present: blue at v ≈ -1.2, green at v ≈ 0.3, and orange at v ≈ 1.1. Group 1 (blue boxes) has a median around -2.8, with whiskers from -3.8 to -1.8 and outliers at -5.5 and -7.0. Group 2 (green boxes) has a median around 0.2, with whiskers from -1.2 to 1.2. Group 3 (orange boxes) has a median around 1.8, with whiskers from 1.2 to 2.8, and outliers at 3.2 and 3.5. The number 8 is printed above the Group 3 box.

A box plot showing the distribution of the Frailty Death process (v) for three groups defined by Mass (k). The y-axis ranges from -4 to 3, and the x-axis has categories 1, 2, and 3. Group 1 (blue) has a median around -2.8, with whiskers from -3.5 to -1.5 and outliers at -4.0 and -4.2. Group 2 (green) has a median around 0.0, with whiskers from -0.8 to 0.8. Group 3 (red) has a median around 1.8, with whiskers from 1.5 to 2.1 and outliers at 2.5 and 2.8. Horizontal dashed lines are present at v = 0.7 (orange), v = 0.6 (green), and v = -1.2 (blue).

Box plot showing the Frailty Death process (v) on the y-axis (ranging from -4 to 2) versus Mass (k) on the x-axis (ranging from 1 to 4). The plot displays four box plots, one for each mass value. The median frailty death process increases with mass. Horizontal dashed lines are drawn at $v = 2$ (pink) and $v = -2$ (green).

Mass (k)	Median (v)	Q1 (v)	Q3 (v)	Lower Whisker (v)	Upper Whisker (v)	Outliers (v)
1	-3.5	-4.0	-3.0	-4.5	-2.8	
2	-1.0	-2.0	-0.2	-3.8	0.5	
3	0.5	0.2	0.8	0.0	1.0	
4	1.3	1.1	1.5	0.8	1.8	2.0, 2.2, 2.5

Box plot showing the Frailty Death process (v) for three groups (Mass (k) = 1, 2, 3). The y-axis ranges from -2 to 4. A dashed orange line is at v=0. The plot shows that the Frailty Death process increases with Mass (k).

Mass (k)	Median (v)	Q1 (v)	Q3 (v)	Min (v)	Max (v)	Outliers (v)
1	-1.8	-2.0	-1.6	-2.5	-1.0	-2.8
2	0.2	0.0	0.4	-0.2	0.6	0.7
3	2.4	2.2	2.7	1.7	3.3	1.1, 3.8

Mass (k)	Weight (w)	Lower Bound (w_{min})	Upper Bound (w_{max})
1	0.50	0.44	0.54
2	0.45	0.41	0.54

A box plot showing the distribution of weights w for three different mass values k (1, 2, and 3). The y-axis represents the weights w from 0.0 to 1.0. The x-axis represents the mass k . For each k , a box plot is shown with a median line, a box representing the interquartile range, and whiskers extending to the minimum and maximum values. Horizontal dashed lines are also present at $w = 0.3$ (blue for $k=1$, green for $k=2$, and red for $k=3$).

Mass (k)	Median	Q1	Q3	Min	Max
1	~0.28	~0.22	~0.38	~0.08	~0.48
2	~0.28	~0.25	~0.32	~0.12	~0.48
3	~0.45	~0.32	~0.50	~0.10	~0.60

A box plot showing the distribution of weights (w) for four different models, labeled 1, 2, 3, and 4 on the x-axis. The y-axis represents the weights (w) ranging from 0.0 to 1.0. A horizontal dashed red line is drawn at $w \approx 0.24$. Model 1 (blue) has a median around 0.22. Model 2 (green) has a median around 0.08. Model 3 (orange) has a median around 0.15. Model 4 (red) has a median around 0.55. Outliers are present for all models, with Model 3 having two outliers near 0.6 and Model 4 having two outliers near 0.1.
